

YongAI Brand Guide

Version 1.0 — built from `YongAI\_logo\_package\_v2` and the current YongAI venture-portfolio direction.

1. Brand idea

YongAI is a quiet operator brand for practical ventures.

The logo points toward a premium, restrained system: architectural geometry, confident spacing, black-and-white authority, and no generic AI tropes. The brand should feel like a modern venture studio / consulting operator — serious enough for enterprise conversations, clear enough for product launches.

Positioning line

Practical ventures, built with operator discipline.

Short description

YongAI is Gary Yong's venture portfolio and applied AI studio: shipping real products, validating workflow ideas, and turning useful patterns into services and companies.

Personality

2. Logo system

Primary logo

Use the YongAI horizontal website header when space is wide: site nav, deck covers, proposals, letterheads.

- Preferred on dark: `public/brand/YongAI\_website\_header\_white\_on\_dark\_2400x600.png`
- Preferred on light: `public/brand/YongAI\_website\_header\_black\_on\_light\_2400x600.png`
- Vector-style master: `public/brand/YongAI\_website\_header\_master.svg` / `.pdf`

Monogram

Use the monogram for compact placements: favicon, avatar, social icon, watermark, card stamp.

- Source PNG: `public/brand/YongAI\_monogram\_black\_transparent\_3000w.png`
- Vector-style master: `public/brand/YongAI\_monogram\_master.svg` / `.pdf`

Vertical lockup

Use the vertical primary mark for square or formal placements: cover pages, brand sheets, large cards, merch mockups.

- Source PNG: ``public/brand/YongAI_primary_vertical_black_transparent_4000w.png``
- Vector-style master: ``public/brand/YongAI_logo_primary_vertical_master.svg`` / ``pdf``

Clear space

Keep at least one monogram stroke-width of empty space around the logo. When in doubt, give it more room. The logo loses its premium feel when crowded.

Minimum sizes

- Header wordmark: 140px wide minimum on web
- Monogram: 28px minimum in UI, 18px only for favicon-style use
- Vertical lockup: 120px wide minimum

Don'ts

- Don't add glow, bevel, drop-shadow, or colored outlines.
- Don't place the black logo on busy dark imagery.
- Don't stretch the wordmark.
- Don't repeat logo assets as decorative filler across a website. Use the logo once in primary navigation, optionally once in a footer or formal cover, then let typography/layout carry the brand.
- Don't replace the monogram with a generic "Y" tile.
- Don't pair it with robot/brain/circuit icons.

3. Color

The logo suggests a disciplined black-and-white system. Color should support hierarchy, not become the brand.

Core palette

Accent discipline

YongAI should stay fundamentally black, white, and warm-neutral on the landing page.

Rule: avoid green, purple, blue, neon, or multi-color venture accents on the main YongAI landing page. Let hierarchy, spacing, typography, and black/white contrast carry the brand.

4. Typography

Primary type

Inter is acceptable for the current web stack: clean, readable, reliable.

Recommended weights:

- Display: 800–900
- Headings: 750–850
- Body: 400–500
- Labels: 700–800 with letter spacing

Type style

- Headlines should be short and architectural.
- Use tight display tracking, but don't crush readability.
- Labels can be uppercase with wide tracking.
- Body copy should be concise; avoid long paragraphs.

5. Layout system

Composition

YongAI should feel like a portfolio board / venture archive, not a generic SaaS landing page.

Use:

- Large editorial hero
- Monochrome logo-led nav
- Bento/cards for ventures
- Thin borders and precise spacing
- Sparse monochrome proof indicators
- Asymmetric hero with one strong visual panel

Avoid:

- Busy illustration scenes
- Gradient blobs as the main identity
- “AI automation” cliché sections
- Too many CTA buttons

Shape language

The logo has sharp architectural geometry. Pair it with:

- modest radius cards: 18–28px

- square-ish panels
- fine hairline borders
- crisp dividers

Avoid overly bubbly SaaS shapes.

6. Imagery and iconography

Use

- Real screenshots and product cards
- Simple line diagrams
- Abstract black/white geometry derived from the logo angles
- High-contrast editorial crops

Avoid

- Robot heads
- Brain icons
- Circuit-board textures
- Generic AI orb/glow imagery
- Stock photos of people pointing at glass boards

7. Voice and copy

Tone

Clear, restrained, operator-led.

Copy examples

Good:

- “A venture portfolio of working products.”
- “Built from live workflows, not pitch-deck abstractions.”
- “Products, experiments, and services with real usage behind them.”
- “AI where it improves the workflow; software discipline everywhere else.”

Avoid:

- “Revolutionizing the future of AI.”
- “Unlock limitless innovation.”

- “Powered by cutting-edge AI magic.”
- “Transform your business overnight.”

8. Web application

The landing page should use the dark wordmark in the nav and a more editorial portfolio layout:

1. Hero: YongAI as a venture portfolio / applied AI studio.
2. Portfolio board: Flowt, OnlyPets, NEON 777 Casino, YourHermes.
3. Method: working products → real workflows → repeatable playbooks.
4. Standards: privacy, practical UX, operator discipline.
5. CTA: simple LinkedIn / YourHermes / portfolio links.

9. Asset inventory

10. Notes on vector masters

The supplied package only included PNGs, so the SVG/PDF masters generated here are bitmap-traced vector reconstructions, not original designer-authored source files. They are useful for web, decks, and general brand operations, but if the original design tool file exists, that should remain the canonical master.
